

# Print Prescriptions

Last Modified on 04/05/2021 1:03 pm ACST

## Script Paper

CareRight has been configured to ensure the printing of prescriptions aligns to known Prescription paper. There may be 3 different types of prescription paper:

- 4004\_10/09
- 4004 (08/06) (this is an A4 sheet of paper)
- PB023.1408 (this is not an A4 sheet of paper)

## Paper Alignment

If when you print a prescription the alignment is slightly off then the current settings can be altered to accommodate different paper. This is a System Admin task.

Refer to [Print Prescriptions - Align Prescription paper](#) in System Admin Guide.

## Number of Medications printed on Script

To control the number of Medications printed on script; see [Global Settings](#)

## Print a Medication on separate Script paper

To print a medication on a separate script paper when multiple medications are prescribed.

Tick the option: **Print Separate**

**Dosage - Zyrtec Oral drops (Oral drops) 10 mg/1 mL 20 mL (2.5 mg/5 drops) [1]**

- ☐ Pbs
- ☐ Rpbs
- ☐ Brand Substitution Not Permitted
- ☐ Include Brand Name On Script
- ☐ Authority
- ☐ Previous Authority
