

Diagnoses

Last Modified on 25/05/2019 10:15 pm ACST

CareRight allows for the user to record Diagnoses against an admission record. When a Diagnoses has been added to a Patients Admission record it will display as follows:

Field Name	Description
Grouper Version:	This is the version of the Grouper being used i.e. AR-DRG Version 8.0 - This can be set in CR Administration>
Diagnosis Related Group (DRG):	This is the assigned DRG either manually or automatically with the 3M grouper integration
Major Diagnostic Category (MDC):	
Type	<p>This is the type of Diagnosis i.e. Principal, Additional, External cause.</p> <p>Note: If External cause is set then Place of Occurrence and Activity will display on this screen also</p>
Diagnosis	This the Diagnosis (ICD10 or generic codes) i.e. B01.9 (ICD that is loaded/managed by your system admin
Condition Onset Flag	This is the condition onset flag i.e Present on Admission
Priority	The system auto populates this value - the first diagnosis will be given Priority = 1, the second Priority = 2 and so on.
Edit (Button)	

From this screen you can:

- Add a new Diagnosis
- Edit an existing Diagnosis

There are two options for adding Diagnoses to an Admission record:

- Quick add (generally completed during coding) - see Quick Admissions Coding
 - Normal add to an admission - can be completed progressively Adding a new Diagnosis
-
