Procedures

Last Modified on 25/05/2019 10:20 pm ACST

CareRight allows for the user to record Procedures against an admission record. When a Procedure has been added to a Patient Admission record it will display as follows:

Field Name	Description
Procedure	This is the Procedure code i.e. 92515-19 (ICD-Procedure) Sedation, ASA 19
Priority	The system auto populates this value - the first procedure will be given Priority = 1, the second Priority = 2 and so on. Note: it can be edited and the priority list re-ordered
Clinician	
Created At	This is the date and time the procedure is updated i.e. 03/04/2018 09:36
Edit (Button)	

There are two options for adding Procedure to an Admission record:

- Quick add (generally completed during coding — see Quick Admissions Coding).
- Normal add to an admission - can be completed progressively Adding Procedures.
