Problem codes are utilised when adding Patient Problems in the Diagnosis & History Groups screen.

CareRight provides a *Generic Problems* codeset, which you may choose to utilise. Alternatively, other codesets such as ICPC2 can be utilised.

To preview the default Problem codeset, review the **Problems** generic table.

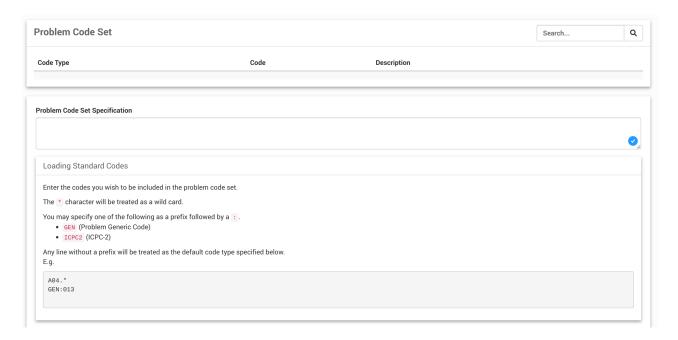

Enable a Problem Codeset

Under **Administration > Patients > Problem Codes,** there is the ability to specify all of the specific codes you wish to

enable.

The simplest way to do so is to select * as a wildcard entry for all available problems.

Problem Code Set   Search... 🔍

Code Type	Code	Description

Problem Code Set Specification

[✓]

Loading Standard Codes

Enter the codes you wish to be included in the problem code set.

The `*` character will be treated as a wild card.

You may specify one of the following as a prefix followed by a `:` .
- `GEN` (Problem Generic Code)
- `ICPC2` (ICPC-2)

Any line without a prefix will be treated as the default code type specified below.
E.g.

```
A04.*
GEN:013
```

You may specify one of the following as a prefix followed by a ':' (colon)

1. GEN (Disease Generic Code) - to load Problem Generic Code (maintained in Generic Codes) type "GEN:*" < This will load all Problem generic codes

2. ICPC2 (ICPC-2) - to load all ICPC-2 codes type "ICPC2:*", for a subset same as above

If you wish to replace the entire set of codes in the system, select the **Delete all existing codes before importing** checkbox.
