

Introduction to Admission

Last Modified on 26/09/2023 10:06 am ACST

This article is part of the systems administration guide. You will require administration access to view the pages mentioned in this article.

This section of CareRight will store details for Statutory Reporting purposes from an Admission.

[Admission](#)

From the CareRight version 6.92 and higher system user can find all the global settings related to admission here.

[Admission Categories](#)

CareRight includes a default Admission category of GENERAL. This includes and displays every field required for **ALL** Australian Statutory Reporting. You may find this default contains many fields that are not applicable to the type of admission and Statutory requirements you are required to comply with.

The Data elements of an Admission Category can be modified depending on the requirements for your admissions. We recommend that you set up new admission categories for each of your common admission scenarios to streamline your process.

Setting up your own Admission Category allows for common values to be set as defaults and avoid double handling or repetitive data entry throughout the Admission process.

Admission categories can be linked to individual Locations and Statutory Coding can be configured for each category/location. Click on Data Elements to configure specific codes.

[Statutory Coding](#)

This area of Admissions is hard coded, as this data is required for Statutory Reporting.
