

Episode Diagnosis Codes

Last Modified on 15/10/2024 9:34 am ACDT

This article is part of the systems administration guide. You will require administration access to view the pages mentioned in this article.

There are now 3 pages where you can configure the code sets. These are:

- Admin → Admission → Episode Diagnosis Codes (ICD.D only)
- [Admin → Admission → Episode Procedure Codes \(ICD.P only\)](#)
- Admin → Patients → Diagnosis Codes (GEN or ICD.D only - defaults to global setting Diagnosis CodeType)

Configure ICD.D codes (ICD. Disease)

Codes in this code set are available when selecting diagnosis codes on Admission, Episode and Cancer Notification records.

1. Click **Administration** from the top right corner of the CareRight screen.
2. Select **Admissions** from the left side menu.
3. Select **Episode Diagnosis Codes** sub-menu item.
 - a. The Episode diagnosis codes display with the following values:

Field	Description	Example
Code Type	This is the code type category - Disease	ICD.D
Code	This is the code	M01.21
Description	This is the description of the Diagnosis code	Arthritis in Lyme disease, shoulder region (A6g.2+)
Valid Data Range	This is the period which the code is valid for	01/07/1998 -->
Remove (Button)	This button allows you to remove a value	

To Import a code /codeset

1. Enter a code into the blank field (e.g., M02.17 or A00.* — you can use * as a wildcard).
2. Leave the value **IMPORT**.
3. Select the **Go** button.

To Remove a code /codeset

1. Enter a code into the blank field (e.g., M02.17 or A00.* — you can use * as a wildcard).
 2. Leave the value **REMOVE**.
 3. Select the **Go** button.
