

Medications - Overview

Last Modified on 20/02/2025 4:35 pm ACDT

CareRight has full prescribing functionality that can be achieved in 2 ways:

1. Non MIMS integration - CareRight gives you an out of the box solution for prescribing.
2. CareRight integrates with MIMS Australia for faster, safer and more efficient, prescribing - giving you more time with your patients. Contact MIMS Australia for your MIMS Integrated Subscription. You will need an account / licence from MIMS to be able to use this integration via CareRight.

MIMS Australia - 1800 800 629

Email: www.mims.com.au

Important Note:

- Script print in CareRight fully complies with the 1st of November 2022 requirements for NSW outlined [here](#).
- CareRight complies with Active Ingredient Prescribing effective 1st of July 2021. View the public announcement of requirements [PBS - Australian Government of Health](#).

The Medications module enhances the following features:

- Current Medications List - Where Medical providers can list down all the medications that the patient is currently using, including medications prescribed by other Medical Providers. Any newly added medications will be listed on top of the list.
 - Route Instructions - These are the general medication instructions that the patient currently follows. CareRight enables the feature to add a new route or select the existing one.
 - Medication Frequency/Instructions - This is available in the drop-down selection - It is a System admin task to add this. Refer to [Prescription Instructions](#) in System Admin guide.
 - Print Authority Prescription - Authority prescriptions can be printed similar to other prescriptions - The authority information will get printed on the bottom of the prescription.
 - Custom Drugs - A list of customer drugs can be
 - Print Separate/ together - It enables the feature to print one or more medications on the same prescriptions (Except for authority drugs).
-
