

# Print Prescriptions - Align Prescription paper

Last Modified on 12/03/2021 2:25 pm ACDT

CareRight has been configured to ensure the printing of prescriptions aligns to known Prescription paper. To our knowledge there maybe 3 different types of prescription paper:

- 4004\_10/09
- 4004 (08/06) (this is an A4 sheet of paper)
- PB023.1408 (this is not an A4 sheet of paper)

If when you print a prescription the alignment is slightly off then the current settings can be altered to accommodate different paper.

This can be done in Administration > Global Settings.

There are three different fields that can be configured to align the content with the prescription paper.

- Prescribing Max Authority Script
  - Prescribing Max Normal Script
  - Prescribing Top Margin Offset - Change this value to alter the margin size - this will be based on the type of prescription paper you use.
-
