

Appointment API

Last Modified on 08/07/2021 12:44 pm ACST

Overview

When appointments been created by daily activities, it will go though our CareRight system. We provide both an API endpoint, which produces Appointment JSON data; and a further tool that regularly retrieves the appointments for a given day; and transforms them into a CSV file. This is provided to a third party; GTS; who generate the letters based on the CSV content..
