

Translate a field in CareRight

Last Modified on 04/10/2023 1:06 pm ACDT

CareRight offers the ability to customize various fields according to client preferences. For example, they can change "Patient" to "Client." However, for system integrity reasons, only authorized **Clintel staff** members are permitted to make such changes upon a request from the client.

In Administration,

1. Click **Translations**

2. find out the field to be translated

3. Type in the **Custom Value**

4. Hit **change**

5. After replacing all the default values into corresponding custom values, Click **Apply** at the top of the screen

Note:

Please ensure all the places where default values appear should be replaced with custom values.

Eg: In order to change **Patient** into **Client** ;

- Press ctrl+F in Keyboard, Search for **Patient**
- All the default fields where the term **Patient** appear will be highlighted in Yellow
- All the 'Patient' in the custom value column should be replaced with **Client**, hit **change** for each row
- in the end, Click **Apply** at the top
- Now, all the fields in CareRight where 'patient' will be replaced with 'client'
