

6.75 Release Notes

Last Modified on 31/12/2021 11:57 am ACDT

About this Release

In each release there may be new features and functions that require one or all of the following:

- Purchase of a module to access
- User Training
- Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

Release Notes for CareRight 6.75

Major Features

Medicare Webservices & PRODA preparation

Full article:

System admin Manual (Configuration) : <https://careright.knowledgeowl.com/help/proda-configuration>

Full reference:

- <https://www.servicesaustralia.gov.au/proda-provider-digital-access>

Medicare has released a major change in the way software will communicate with it (client adapter technology replaced with web services). CareRight 6.75 includes the new functionality, currently disabled until certification with Services Australia is completed.

This release includes the configuration of [PRODA accounts](#) which will replace PKI certificates for authentication. Customers are encouraged to set this up in advance of cutover to web services.

Cancel

Receipts & Refunds

To improve system performance, a major rework on all Receipts and Refunds has been done; changing the underlying structure.

This now means that money can be (correctly) marked as unallocated at the Patient or Location level. Previously CareRight treated Receipt as either:

- Combined payments
- Batch payments
- Adjustments with a transaction attached (making them a receipt)

This work has been done to add a receipts table so we can concisely identify payments in a single place. Statements are still used to link the receipt to patient accounts and a statement is added for each invoice allocated on a patient account. A statement can also be left unallocated on a patient account.

The only change end-users should see is that some of the old receipt types (batches, combined payments) can now be reallocated. The converting of a receipt to a combined payment to move money between accounts is a thing in the past!

NOTE: Data warehousing should now look at the receipts table instead of the **f_statements** table.

Reporting / Datasets: Migration to Reporting Views

In order to allow major future changes to CareRight's internal structure, but maintain the ability for customers to ingest data from our application we have introduced a number of backward-compatible Reporting Views.

This will allow customers to consume a stable, fixed schema of data from our application.

Appointment Booking System APIs

This release provides a new set of inbound and outbound messaging, based on more modern standards (JSONAPI, OAuth2 Client Credentials; XML) than the traditional HL7 integrations offered.

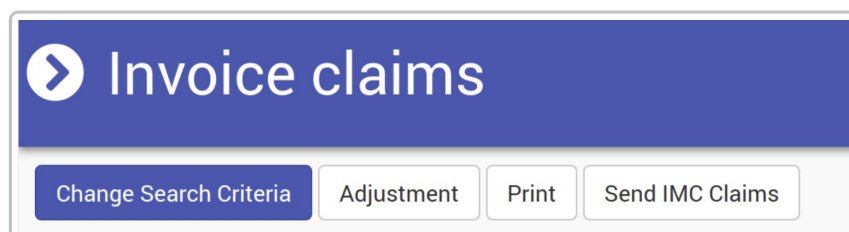

This enables:

- Per Location notification of new Appointments, Patients
- Ability to retrieve a list of Appointments by date range
- Ability to reserve time for a Medical Provider
- Ability to create, update Appointments for a Medical Provider

Contact us for more information.

Invoice Claims > Ability to adjust Eclipse (Private Health) Invoices

There is now the ability to perform the same kind of adjustment to multiple invoices at once; when they are overpaid or underpaid.

Finalise With Adjustment

This will add an Adjustment to the following invoices marking them as paid.

Adjustment Type

Discount (Credit)

Statement Note

Invoices

Number	Invoice Date	Patient	Provider	Guarantor	Invoice Amount	Paid	Claim Status	Problem
28	07/12/2017	000005 Maggie Jane Brown	Dr Juan KRILL	iTest Medicare test system	\$809.75	\$390.61	Problem	Claim processing completed. Invoice not fully paid
