

## 6.77.1 Release Notes

Last Modified on 31/12/2021 3:36 pm ACDT

### About this Release

In each release there may be new features and functions that require one or all of the following:

- Purchase of a module to access
- User Training
- Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

### Release Notes for CareRight 6.77

## Major Features

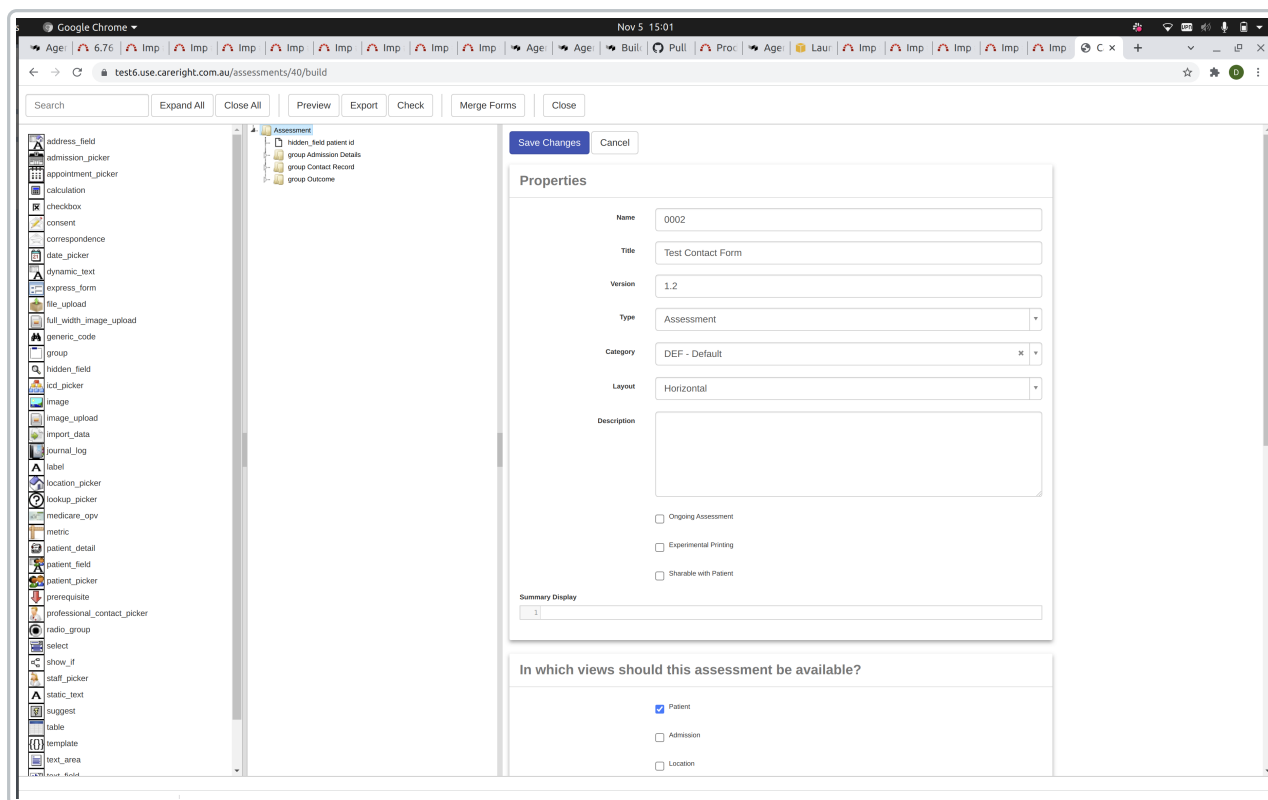

### Patient Portal & Assessments

Assessments can now be sent securely to a patient for completion, for example, a new patient intake form.

Mechanisms include email, SMS, and QR code (for an in-clinic device).

The screenshot shows a web browser window with the address bar displaying "test6.use.careright.com.au/patient\_portal/instances/263/edit". The page has a blue header with "Home" and "Sign out" links. Below the header is a grey bar with the word "Welcome". The main content area is white and contains a form titled "Patient Portal Intake Form". The form has a section for "Required fields marked with \*". It includes two text input fields: "Given name" with the value "Rufus" and "Family Name" with the value "Bastian". Below these is a section for "Do you consent to procedure X?" with "Yes" and "No" radio buttons. At the bottom of the form is a button labeled "Save and continue later".

## Enhancements

### Branding Settings

For public-facing assessments, system administrators may wish to style CareRight to align to their branding. You can now provide:

- Logos
- HTML Email signatures, header and footer images
- Custom CSS styling - CareRight has styles available from [Bootstrap 3](#).

## Display Names/Username/Email in the login

When using external identity providers, such as SAML, sometimes the usernames are not user-friendly. System administrators can now configure CareRight to show either email, login, or a formatted display name.
