

6.77.2 Release Notes

Last Modified on 11/01/2022 10:36 am ACDT

About this Release

In each release there may be new features and functions that require one or all of the following:

- Purchase of a module to access
- User Training
- Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

Release Notes for CareRight 6.77.2

Enhancements

Display location address in the Appointment booking screen

Full article:

CareRight User Manual: <https://careright.knowledgeowl.com/help/creating-a-patient-appointment>

CareRight will now display the location address when booking appointments.

☐ Include inactive patients?

Dataset reporting on the number of nights

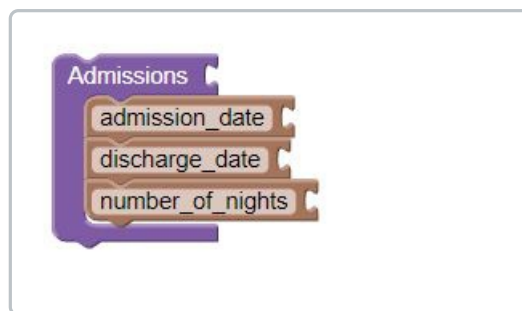

Full article:

System administration Guide (Configuration): <https://careright.knowledgeowl.com/help/data-sets>

CareRight User Manual: <https://careright.knowledgeowl.com/help/reporting-create-a-new-report>

Users can now report on the number of nights in admission, it will count the admission days based on the number of nights.

The way the data can be fetched from the dataset is by linking the column **number_of_nights** on the **Admissions** table

This will result;

admission_date	discharge_date	number_of_nights
2015-04-04T13:29:00.000Z	2015-09-04T13:31:00.000Z	153

Dataset reporting on Staff members and Location

Full article:

System administration Guide (Configuration): <https://careright.knowledgeowl.com/help/data-sets>

CareRight User Manual: <https://careright.knowledgeowl.com/help/reporting-create-a-new-report>

It is now easier to join Locations for Staff Members and vice versa.

The way the data can be fetched from the dataset is by linking the **staff member** and **Location** table.

Security for Professional Contacts

Full article:

System administration Guide (Configuration): <https://careright.knowledgeowl.com/help/permissions-and-what-it-enables>

Users with Admin Role are no longer automatically granted professional contact permission. All existing users have been migrated.

Allow Guarantor configure for different Outpatient and Inpatient rates

CareRight can now recognize when a patient is an OutPatient, and a different rate should be applied based on accommodation, for health fund groups. Previously this behavior only applied to Medicare and Private Guarantors.

A new element in assessment builder - Time Picker

Full article:

Reference: <https://careright.knowledgeowl.com/help/assessment-forms-builder-window>

Similar to a date control, assessments now allow you to input a structured time.

The screenshot displays a web form titled "Test Contact Form". At the top, it states "Required fields marked with *". The form includes several input fields: "Time of incident" (with a clock icon and a dropdown showing "05:55"), "Admission Date", "DRG", "Is Client re-presenting?", and "Target Date for Contact" (with a calendar icon). A modal time picker is open over the "Time of incident" field, showing a circular clock face with the time "05 : 55" selected. A red error message "Invalid Admission ID field on element e219360" is visible next to the "Admission Date" field.

Enhancement to read SAML claims to determine security group

Previously, the system allowed users to set a blanket, a default group for users. Now, CareRight can read a particular claim, ie, *Department*, and find a matching security group for new users to be allocated to.

Translated labels for MRN and CRN in the appointment booking screen

Full article:

CareRight User Manual: <https://careright.knowledgeowl.com/help/creating-a-patient-appointment>

Previously, the system did not correctly translate all labels in the Appointment screens, even when customized, this is now fixed

The screenshot shows a form with three labeled input fields: "MRN2*" with the value "0000001101", "CRN2*" with the value "000059", and "Client Name*" with the value "TEST, 91154".
