6.81.4 Release Notes

About this Release

In each release there may be new features and functions that require one or all of the following:

· Purchase of a module to access

· User Training

· Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

### Release Notes for CareRight 6.81.4

- Enhancements
  - Appointments record Created By
  - Defects Resolved/Minor Enhancements

Enhancements

Appointments record Created By

Appointments record the user who created them. This only captures the first creator. Audit logs should be used for further detail of subsequent edits.

This field is also exposed to Data Sets.

Defects Resolved/Minor Enhancements

- Next available appointments - further restrict views by user location

- VAED: Duration of non invasive ventilation in icu needs to render with a "blank" option where it isn't present

- Appointment Reports - Waiting Time - Ensure appointment wait time column calculates from original appointment create date (rebooking), or appointment creation
- Availability fetching - Passes in wrong date
- HCP: ICD Version is hardcoded
- Program attendances - wrong criteria for missing admission where a patient attended, then was deleted
- 3M Grouper - Remove workaround CodeVersionDate instead of CodeVersion
