

# My Health Record - Access code

Last Modified on 07/10/2022 4:25 pm ACDT

## View a patient > My Health Record > Gaining access

Patients have the choice to [Restrict Access](#) to their My Health Record. In this situation, your Patient will provide a relevant access code that you can key in to gain access.

Alternatively, in an *emergency* situation, you may also enter a "break glass" code to access details.

You can also record patient consent, for you to upload information to their My Health Record. By default, *consent indicated* is selected.

When this setting is changed, the default behaviour of the system is to discourage, but not prevent, uploading of information.

Access Codes

Access to the patient's My Health Record has been granted. Additional LDAC codes can be entered if the patient has hidden records or documents.
