6.86 Release Notes

Last Modified on 06/03/2023 12:05 pm ACDT

About this Release

In each release there may be new features and functions that require one or all of the following:

· Purchase of a module to access

· User Training

· Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

Release Notes for CareRight 6.86

In this article:

- Major Features
  - Online Payment for Online Appointments, with Stripe
  - Admissions & Program Enrolments > Checklists

  - Appointments > Wait list modernisation
- Enhancements
  - Admissions > Ability to exclude from HDMS reporting
  - Rate Limiting for sign in attempts
  - Location > Occupancy Summary > Track room utilisation for appointments
  - Provider > Accounting > Not Normal Aftercare by Default
  - Defects & minor enhancements

Major Features

Online Payment for Online Appointments, with Stripe

We've expanding our Online Booking capabilities with Online Payments with Stripe.

This is considered a **pilot** release, where we will make this functionality available on request for feedback.

Admissions & Program Enrolments > Checklists

When performing an admission or enrolment, CareRight now enables you to associate a checklist of steps so that you can more easily track a patient's progress.

Read more about Checklists

For admissions:

Mrn	Patient	Location	Date	Arn	Admission Category	Steps Done	Presenting Illness	Type C	Funding	OOP	OEC	
000065	Miss Lee Test	Adelaide	31/01/2023	000078	Testing Checklists	2/2	302	No	Private	Not Set		▾

Tuesday, Jan 31 Pre-admissions (Today)

< Today 📅

Patient was successfully pre-admitted

Pre-admission - Surgical
✗ Drivers licence or other identification ✗ Informed financial consent completed ✗ Next of kin information collected ✗ Patient label printed

Pre-admission

☐	000009	Mr Trey Oritz	Withdrawn Today	19/10/2022			
☐	000039	Dr Bob Example Smith		31/01/2023	0/1	Remove	

Credentials checked against a data breach service

CareRight now validates user credentials against a data breach API. System Administrators will need to whitelist the following endpoint: https://haveibeenpwned.com/API/v3

This feature ensures the CareRight product conforms with the requirements of *Security Requirements for My Health Record Connecting Systems Conformance Profile 1.0*, SEC-0082 Single-factor authentication (SFA) breached credential validation.

Two Factor Authentication (2FA) via TOPT available

Where organisations are using CareRight, and do not have an external authentication service providing 2FA such as SAML/Azure Active Directory, it is now possible for users to secure their accounts with Two Factor Authentication.

This feature ensures the CareRight product conforms with the requirements of *Security Requirements for My Health Record Connecting Systems Conformance Profile 1.0.*

Main article: Setting up Two Factor Authentication (2FA)

Appointments > Wait list modernisation

See Wait List - Overview . The Wait list functionality has been improved to:

Click *here* to view the updated Guide.

- Allow re prioritisation from one screen

- Show more patient details, for managing triage/urgent care scenarios

- Display waiting time

- Display, where enabled, room allocation of the patient

- Display elapsed waiting time, to assist in triage/prioritisation decisions

- Display an associated assessment, to allow for flexible data capture.

Enhancements

Admissions > Ability to exclude from HDMS reporting

Click *here* to view the updated Statutory Reporting guide.

In some circumstances, certain admissions should not be submitted to HDMS , particularly with regard to Same Day ACHI Procedure Codes.

CareRight now allows you to omit a specific admission from HDMS data, while reporting other stat reporting obligations such as HCP.

Rate Limiting for sign in attempts

CareRight now features rate limiting controls to prevent abuse accessing accounts by malicous actors.

Location > Occupancy Summary > Track room utilisation for appointments

Main article: Location Occupancy

In addition to tracking bed and room utilisation in the context of admissions, the occupancy report now also details any appointments currently taking place in a given room.

This allows providers and other staff to ensure they have good visibility of where specific patients are or if a particular specialised room (ie with specific equipment) is free.

Incoming		000042	Dr Dan Testing	11/02/2023 at 12:54 PM	Assign

Consult Room B		000106	Mr vvt hong	14/02/2023 at 10:40 AM	

Provider > Accounting > Not Normal Aftercare by Default

Click here to access the updated User Guide.

Where a provider does a consult (MBS Item 105), it is often important to flag where subsequent visits are not part of the typical post procedure aftercare, and therefore eligible to be claimed.

Following changes to the MBS, we have expanded the behaviour of this control to cover all telehealth and phone items, in addition to face to face consults.

Table 1 – Ongoing telehealth items and equivalent face to face services (out of hospital patients)

Service	Face-to-face items	Video items	Telephone items
Specialist Services			
Specialist. Initial attendance	104	91822	-
Specialist. Subsequent attendance	105	91823	91833

The setting in the provider record has been renamed.

When set, when an invoice is claimed, the *After care override* flag is set to indicate the items billed are NNAC.

> ***Internal ref: 98539***

Defects & minor enhancements

- Fix HC21 form should not show condition onset flag

- Security: CareRight now defaults to a **minimum password length of 14 characters.** Control: ISM-0421; Revision: 8.

  We highly recommend using a password manager or creating a <u>pass phrase.</u>

- Security: CareRight now sends a permissions policy header

- Patients > Health Funds > Validate IRN maximum length as up to 2 characters.

- Fix issue with printing OEC

- Fix Calendars session types (Application Error)

- Find Next Available - Search by Suburb/Postcode - More button when searching by distance

- Fix performance regression with patient pictures

- Fix appointment list update status calls triggering refresh regression

- Fix ActiveModel::ForbiddenAttributesError in pictures_controller

- Online appointments avoid showing past appointments

- Online appointments will no longer show providers who are enabled for calendaring, but do not do online appointments.

- Printing an unapproved current assessment causes crash

- Waitlist - Show wait time in hours/minutes

- Admin > Calendar Holidays > Show "all providers" text or more clearly indicate with a calendar holiday applies globally.
- Admin > Calendar Views > It is now possible to see more detail of which providers are in which views
- Bug - Create a waitlist item, then update it will sometimes remove the location
- Copy admissions - avoid scenario where only half transaction commited
