Configure a private account to use a health fund rate table

The system now allows user to opt in to overriding rates. Where a private account is created and user need to use a specific rate table (example: health fund's rates, or specific rate for particular individual patient).

1. Enable ~~(can be used in private account rate overrides)~~ under rate definitions

Rate definitions must have enabled **Can be used in private account rate overrides** for Rate to be selectable on patient account.

System Admin - > Accounting - > Rate definitions - > Show - > Edit and enabled **Can be used in private account rate overrides** - > Update

2. Enable at provider level

User must also be enabled at the billing provider level.
