6.90 Release Notes

About this Release

In each release there may be new features and functions that require one or all of the following:

· Purchase of a module to access

· User Training

· Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

Release Notes for CareRight 6.90

In this article:

- Major Features
  - ePrescribing with Medisecure

  - Online Signing: HC21 forms
- Enhancements
  - Program Schedules > Sort and Archive
  - Providers > Theatre List
  - Patients > NDIS Identifiers
  - Passwords > Strength indicator
  - See Concurrent users in Assessments
  - Security - ability to lock account on password breach
  - Datasets > Admissions > New calculated columns
  - Defects & minor enhancements

Major Features

**ePrescribing with Medisecure**

Creating an ePrescription with Medisecure is now possible in the product. Note, due to changes to PBS prescriptions via ePrescribing; CareRight is currently undergoing renewed development and certification with other providers.

Prescribing - SafeScript & Provider setup

In the version of CareRight released to your test environment, there are a number of small but important changes to Prescribing. Specifically:

- *CareRight is pre-configured with Real Time Prescription Monitoring*
- *There are additional steps when prescribing **Schedule 8** (Drugs of Addiction), such as the ability to enter an NSW Health Authority Number; and requiring prescribers to confirm their identity by re-entering a password, and confirm the patient date of birth.*
- *If there are any Custom Drugs in use (i.e. Fentanyl 200mcg Sublingual Tablet 200 mcg) that are Schedule 8, these should be updated via **Admin > Medications > Custom Drugs > Edit**, and the **Schedule 8** flag should be set.*

For each provider that is likely to prescribe these medicines, their profiles must be updated with new settings. If the provider is using SafeScript, enable National Data Exchange Prescription Monitoring to incorporate this into the CareRight prescribing workflow.

Prescribing

Prescriber Number	2042545
Prescription Authority Number	1
Default Prescriber S8 Warrant / Permit Number	
Prescription Passphrase	
Prescription Passphrase Confirmation	
	☐ Clear Prescription Passphrase

fips-updates   yes        disabled   NIST-certified core packages with priority security updates
livepatch      yes        enabled    Canonical Livepatch service
```

Overnight and Long Stay IHC Claiming

Careright continues to enhance the IHC claiming capabilities of the system, with a goal of removing the requirement for split claiming between Thelma and CareRight for certain claims.

A number of improvements have been made, and we are renewing our certifications here.
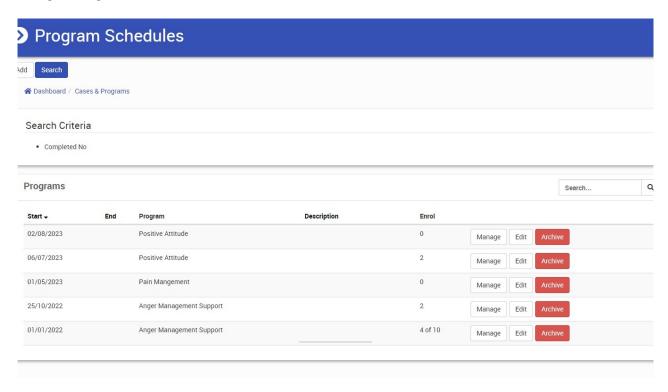

Online Signing: HC21 forms

CareRight is helping remove the need for any paper claim forms, providing the ability for a patient to sign electronically a HC21 form. Following a successful pilot, this will be expanded to other paper forms (DB4 assignment of benefits, etc)

Online Ref: HC21 Form

Enhancements

Program Schedules > Sort and Archive

For a given Program Schedule, it can now be either 'active' or 'archived'

Providers > Theatre List

Minor layout changes for patients with long email addresses.

Patients > NDIS Identifiers

Patient records now capture NDIS Identifiers.

Passwords > Strength indicator

To assist in choosing strong passwords, we now display a complexity calculation of your proposed password. Where LDAP or SAML authentication is not otherwise enabled; we highly recommend the use of **Password Managers** to suggest strong passwords, or enabling Setting up Two Factor Authentication (2FA) using tools such as https://1password.com/

See Concurrent users in Assessments

A new global setting is available to enable an *experimental* feature.

For users with multiple staff working on the same assessment, the system will now display if two users are trying to edit the assessment at the same time.

Security - ability to lock account on password breach

Datasets > Admissions > New calculated columns

For **Single Procedure/Single Theatre** admissions, there are now the following columns available in Admission datasets:

- duration

- theatre_end_to_discharge_time_duration

- theatre_start

- theatre_end

Additionally, **Appointments** can now be associated with **Admissions,** where the appointment date is equal to the admission date. This is useful for Day Surgery admissions only.

Defects & minor enhancements

- Correspondence:

  - New correspondence/patient letter - shift error checking

- Fix issue with appointments API where a negative duration has been supplied resulting in appointment type not being found

- Fix issue with online appointments when appointment type not found, determining booking fee

- Fix issue with online appointments when start date parameter is not correctly supplied

- Fix issue with online appointments and required contact details

- Monitoring for excessive data growth

- Address deployment issue with *Can't install RMagick 4.1.2. Can't find the ImageMagick library or one of the dependent libraries.*

- Admin > VPN > ReDoS vulnerability in VpnController#show

- Remove a number of unused legacy jQuery dependencies

  - jquery.editable

  - jquery.timepicker

  - jquery.strings

- Events - Display of general service - better display of note.

- Deployment issue - recreate index on user table to remove ANSI NULL setting inconsistency on SQL Server.

- Fix issue where appointment API message creates calendar sessions before it does the can_access check

- Admissions

  - Allow viewing of, editing of gender diversity

  - Allow viewing of IHI at time of admission
