Import_data: Assessment Content Copy Feature

The **import_data** element facilitates the copying of information from previous assessments, aiding in the efficient creation or modification of assessment content.

Example Use Case

Consider a scenario involving two assessments: Nurse Note and Doctor Note. The Doctor Note assessment necessitates access to the Nurse Note's description to formulate prescriptions or patient diagnoses. By employing the **import_data** feature, the necessary information from the Nurse Note is automatically transferred to the Doctor Note, streamlining the process.

Rules for using the import_data Element

1. **Granular Copying:** The import_data element can only copy individual fields one by one, such as text entries, rather than entire sections like tables or groups.
2. **Excluded Fields:** Certain special fields, such as select, label, or dynamic text fields, are not eligible for copying.

Steps to Utilise the import_data Element

1. **Administration:** Access the administration panel.
2. **Assessment:** Navigate to the desired assessment or create a new one.
3. **Drag and drop import_data:** While creating or editing the assessment, incorporate the import_data element.
4. **Selection of Source Assessment:** Select the specific assessment version and assessment code from which you wish to copy content, as demonstrated in the provided screenshot.
- 5.
