6.96 Release Notes

About this Release

In each release there may be new features and functions that require one or all of the following:

· Purchase of a module to access

· User Training

· Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

Release Notes for CareRight 6.96

In this article:
- Major Features
  - Healthlink Australia & Secure Messaging Improvements
  - Online Bookings and Stripe
  - Online Bookings and Enquiries - Attachment security improvements
  - Add ability to create and share a patient interactive module assessment via trigger scripts
  - Defects & minor enhancements
  - Assessments > Appointment Picker > Better control of associated appointments displayed
  - Datasets > Adding primary key to datasets

Major Features

Healthlink Australia & Secure Messaging Improvements

We are making quality improvements to our secure messaging implementations (Argus, Medical Objects, Healthlink NZ) and adding support for Healthlink Australia - we are undergoing certification testing at this time.

Online Bookings and Stripe

We have improved the link between Stripe and Online Bookings to ensure when payment is required, this is modelled in the appointment workflow.

Online Bookings and Enquiries - Attachment security improvements

In order to improve the ability to provide relevant clinical information, we've overhauled our handling of attachments in patient facing assessments.

This includes rate limiting and a tighter security model, as well as discarding attachments if a user does not proceed with their booking or enquiry after a limited window.

Add ability to create and share a patient interactive module assessment via trigger scripts

So that customers can perform assessments in clinic, seek further information when performing triage during an intake process, then send **follow up questions** or **post treatment outcomes and measures** (PROMS), we've added the ability to trigger a **patient interactive module assessment** to our automation system.

Model	Name	Details
Patient	share_assessment_to_patient	Trigger method

if (patient.share_assessment_to_patient("sample_assessmnet", "Email")){ alert("Assessment shared"); }else{ script.fatal('Error share assessment'); }

Parameters

1. assessment_name (String)
2. share_method (String)
3. options (Hash)

Returns

- - true or false

Contact us if you'd like to enhance your workflows with patient engagement tooling.

Defects & minor enhancements

- Security - update rack

Datasets > Adding primary key to datasets

CareRight's dataset builder now allows you to select the primary key. While typically CareRight does not expose internal identifiers; this is useful for external systems consuming datasets.

- Theatre HC21 form should only show theatre items.
- Assessment Reports > Show associated case ID if applicable, patient id, location id.

Release Notes for CareRight 6.96.12

- Ensure a report_result can be created for Argus snapshot
- Appointment Picker > Change label (#6274)
- Primary Impairment Type - Default to blank
- Licencing Metrics > Add counts of telehealth appointments (#6292)
- Online Booking provider name corrections
