

## 7.3.0 Release Notes

Last Modified on 28/04/2025 10:45 am ACST

---

### About this Release

In each release there may be new features and functions that require one or all of the following:

- Purchase of a module to access
- User Training
- Specific process to be used to ensure the correct functioning

Please read the release notes and the corresponding manual pages to ensure that you understand the changes being made, what module they are associated with, and how they impact your business processes.

If you have any questions about anything in a release, please contact support either by phone or through a Redmine ticket.

## Release Notes for CareRight 7.3.0

### Major Features

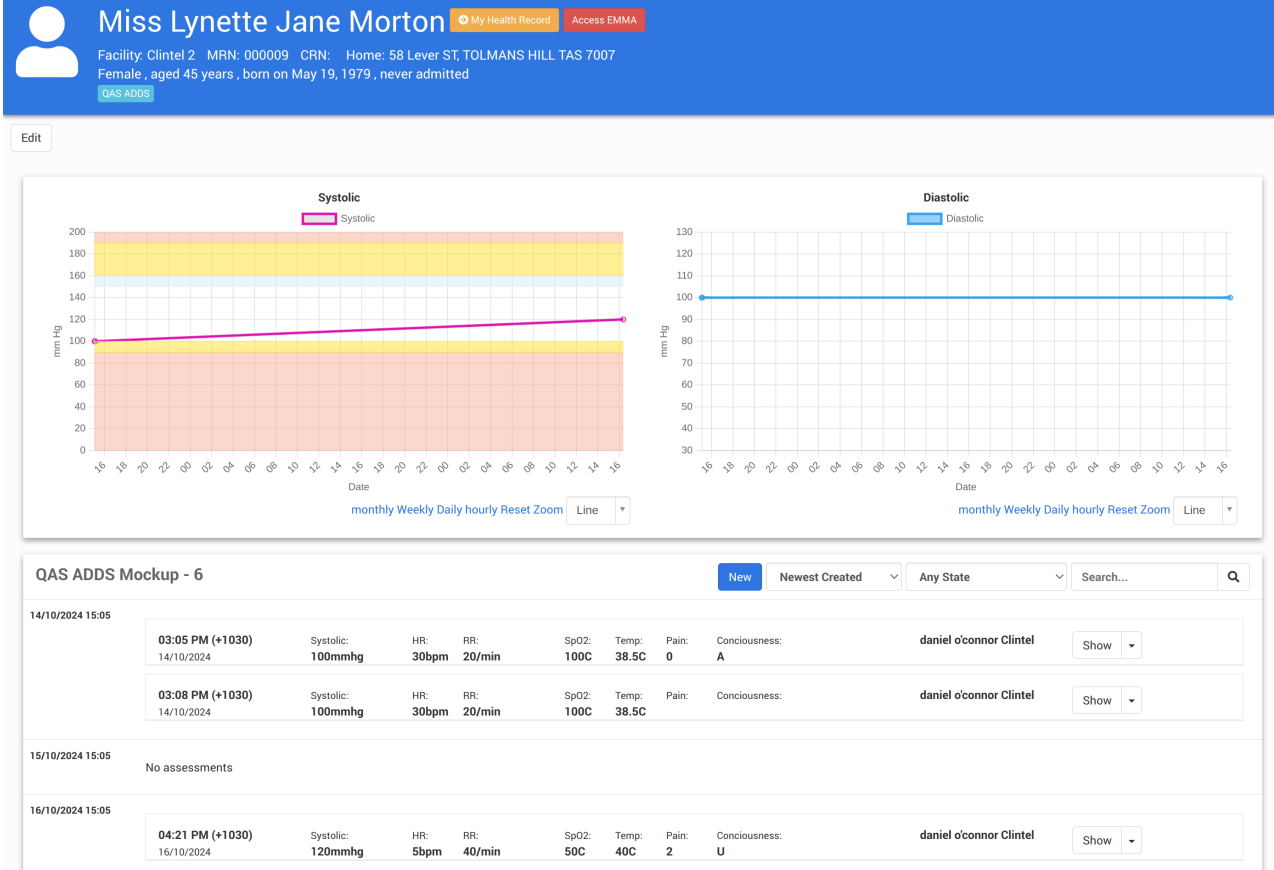

#### Charts

**Experimental feature: This is not generally available to all customers at this time, and is subject to further revision.**

Main article: [Charts](#)

We have extended the core capabilities of our **Metrics** and **Assessments** functionality; allowing for a **Chart** to be created. In the CareRight context, a **Chart** is a series of **Smart Forms/Assessments** that focus on key metrics, and displayed over time.

The CareRight system is pre-loaded with a number of **Observation Chart** standards; with the expected ranges for a patient pre-defined per chart.

## Discharge Letters > Recent Observations available as replacement variables

It is now possible to include a series of measurements over time, ie similar to what has been collected in an observation chart.

This allows clinicians to highlight areas of concern.

#### Discharge Plan > Surfaced more information gathered through admission

So that it is clearer and easier to understand *what and when* events occurred through the admission process; we have brought together the common components that are referenced when writing a discharge letter.

Further product enhancements are planned in this area.

## Discharge Letters > Ability to upload PDF

In correspondence, it is now possible to upload a letter in **PDF format** from an external system, assessment or similar.

This small but important change enables two things:

- Results, observations, scans or similar can be shared via secure messaging; **where the size limit is 512kb or less (healthlink)**
- Letters or assessments related to **discharging a patient** can be generated externally; even from other systems.

When uploaded as a **Referral Discharge Letter**; this can be published to **My Health Record**.

This assists organisations in meeting **NSQHS Action 1.18**.

## Providers > Provider Dashboard and locked down access

 **Experimental feature: This is not generally available to all customers at this time, and is subject to further revision.**

For customers where providers operate with a limited subset of patients; ie as a third party contracted clinician; CareRight now supports a specific **Provider Dashboard** experience.

Where a provider is granted a new permission; **view\_own\_patients**; access to that patient record is only granted where there is a direct relationship via:

- Primary Provider is the logged in clinician or
- There is a case where logged in clinician is a case worker or
- There is an appointment with the logged in clinician

A more limited subset of links and options is presented to providers when logged in in this mode.

This feature is likely to further evolve, adding additional accesses (ie: Programs, Admission or Task based relationships) and is not recommended for general use.

## Receipt Number Generation

 **Core architecture change**

For a number of years, CareRight maintained feature parity with its predecessor product, *The Specialist*. A key component was the use of **Counter Sets**, which were used for the generation of various database identifiers in that legacy system.

Modern relational database systems provide the concept of **sequences** which fulfill the same purpose; built in as a core database concept.

We have migrated the **Receipt**, **Refund** and **Invoice behaviours** within the system to rely on this core database concept. As this is a low level, fundamental architectural change as this becomes available we will establish with you a pre and post go live monitoring plan to detect any issues.

## Defects & minor enhancements

- Regression with default labels: display-align="left" after upgrade of printing component.
- Telehealth - Product Default Templates - Appointment Cancelled notification with iCalendar attachment

- Fix z-index issue with some popups
- Add ability to archive contacts
- Printing failure: Fix lengths of backtraces
- Fix values not showing up on previous banking reports
- Fix [Fatal Error] healthlink\_pdf\_1727399969\_50546884550440.xml:1:15: The value following "version" in the XML declaration must be a quoted string edge case
- Fix ePrescribing - failure to display errors - ensure array for send prescription partial
- Add send\_email trigger script method, to mirror send\_sms.
- Fix minor bug with Admin > Message types > Show
- Add find\_alert, create\_alert methods to mirror find\_notice, create\_notice to trigger scripts.
- Admin > Correspondence > Message Type - Ensure email templates have a code editor loaded
- TSMS Reporting - Add support for reporting 'self funded' rather than 'unknown' for principle source of funding.
- Add move\_workflow function to trigger scripts; to allow patient portal assessments answers to progress workflow
- Add a system user account for anonymous responses to patient portal assessments for auditing purposes
- Improve trigger script share\_assessment\_to\_patient to allow the same assessment to be shared by multiple channels
- Remove ERX Medicare expiry validation prior to sending prescription
- Calendar view > Legacy layout > System displays username/email not user display name; which is a confusing UX
- Ensure upload of PDF to MHR creates correspondence snapshot
- Workflow: Add a sort priority of stage name to take precedence over sort by oldest.
- Fix issue with provider who isn't billing provider on billable appointment
- Further improvements around removing a record from VAED submission behaviour
- Assessments - 'Required' field within show\_if to be validated only on condition specified
- Improve migration for Hospital customers to hide FIM, SNAP by default on existing admission categories
- Improve product display of radio (button group) controls on small devices in assessment system.
- Healthlink - fix issue with referral letter CC to non professional contacts.
- Healthlink - fix issue when sending referral letter via healthlink with an incomplete provider setup
- Add versioning to Standard datasets
- Fix issue with combined payment and printing of receipt when multiple patients/invoices are in one receipt.
- Improve migration for Hospital customers to hide FIM, SNAP by default on existing admission categories
- Healthlink - fix issue with referral letter CC to non professional contacts.
- Healthlink - fix issue when sending referral letter via healthlink with an incomplete provider setup
- Correct query logic on legacy SQL Server instances to identify cloud migration candidates for attachments
- Admin > Correspondence > Attachments > Ensure attachment is added to the current approved version(s) in all cases
- Admin > Correspondence > Template versions - Force usage of current approved version in all cases
- Data Migration Tooling - remove legacy MedicareRliRecord, LineAllocationLog, ProblemSuggestion cleanup behaviours.
- Fix whitelist of redirect URLs to avoid downgrading from HTTPS to HTTP in some circumstances.

- Banking > Fix crash when no transaction types are configured for certain categories
- Transaction Means > Mark "Eftpos (Credit)" as "Eftpos"; not "Card"
- Receipts > Fix display for combined payment across multiple invoices/patients
- Workflow > Allow a workflow\_manager to archive at any point
- Pictures > Cloud Migration > Tolerate malformed images when thumbnailing
- Assessment Elements > Item Picker > Option to hide discontinued items
  - Provider only dashboard - Fix unbatched\_invoices scope issue
- Appointment > Edit > Assistance picker - Limit to a maximum of 1000 professional contacts.
  - Where the appointment type is **Enabled for Theatre**; show only **Specialists or Surgeons** for theatre assistance.
  - Customers are encouraged to review their professional category classifications are correct where the Careright Theatre module is in use.

## Release Notes for CareRight 7.3.1

### SAML Authentication > User locator strategies and post authentication strategies

As Microsoft Entra defaults to a *NameID* strategy of Persistent; but presents different NameIDs across configured applications; this often presents issues with UAT vs production credentials.

To eliminate this issue, we have enabled a configurable Object Identifier based authentication method; which is more stable.

### Defects & minor enhancements

- Optional configuration to enable/disable patient account select on events
- Minor fixes to lock down provider dashboards further - cases
- Admin > Users > UX improvements for provider/staff member/user pages to more easily understand which items are linked to each other.
- Minor fixes to lock down provider dashboards further - batch claims
- Allow healthlink messages to default to patient location (incoming)
- Backport filename display on documents tab
- Allow deletion of admin task types when unused
- Improve calendar lockdown for provider dashboard
- Datasets - add provider *user* email
- Fix new cases to use exceptions and better rollback handling
- Improved debugging tools for ENV variables
- Fix cleanup of expired telehealth links
- Fix rate limit issue on merge SAML users
- Datasets > Invoices > Add public attributes for bulk billing consent

- Branding Settings > Show uploaded assets

## Release Notes for CareRight 7.3.2

### Defects & minor enhancements

- Provider Directory - Improve handling of bad data from Healthlink
- Fix minor bug with trigger script duplication in admin area
- Fix rendering bug with banking report
- Fix minor issue with searching templates in correspondence on draft letters
- Change to HMDS mapping behaviours when unsupported values sent
- Fix admin link

## Release Notes for CareRight 7.3.3

### Defects & minor enhancements

- Online Booking - Allow multiple future weeks to be loaded
- Correspondence - Printing errors - Render full detail
- S3 Download - Fix filename with invalid characters issue
- Enquiries - Improper required field validation in patient portal assessments
- Medicare IMC paydown - minor fix for edge case
- Fix appointment telehealth link issue
- Fix issue with document/complete tab
- Ensure clean of patient data removes events
- Task search improvements
- Fix limit of providers selectable in alerts

## Release Notes for CareRight 7.3.4

### Defects & minor enhancements

- Fix transaction policy for viewing own patient receipts
- Patient portal invoice signature capture error fix and enhancements
- Fix patient summary metrics fields label display
- Teams URL generate for rebooking/reschedule appointment issue fixes

## Release Notes for CareRight 7.3.5

### Defects & minor enhancements

- Fix required field behaviour/sort order customisation on patient portal (person vs patient)

- Ensure provider/location is passed when creating correspondence snapshot
- Fix issue with required fields in patient portal assessments when showing errors
- Search IHI: IRN will be mandatory for a Medicare Card Search.
- Search IHI: If the HI Service finds a unique match to the IHI record with a 'Retired' status, the HI Service will return informational message (#02270), with the IHI details, depending on the configuration.

## Release Notes for CareRight 7.3.6

### Defects & minor enhancements

- Fix Admission > Display Hidden Fields > Admission FIM Scores are now mandatory, even if 'hide FIM' is ticked.

## Release Notes for CareRight 7.3.7

### Defects & minor enhancements

- Add av\_scanned\_at to default\_image when seed
- Admissions: Ignore FIM scores unless you set the right care type
- Allow \$0 balance account statement
- Customer specific estimates - running as specs
- Fix issue for both online enquiry and appointment
- Improve Bulk Print invoices
- Improve Join Patient => Provider
- Location archiving logic

## Release Notes for CareRight 7.3.8

### Defects & minor enhancements

- Fix admin > settings > MRN defaults
- Fix issue with appointments detecting type for telehealth
- Handle malformed user input for online booking dates
- Handle MIMS repeat prescription with discontinued drug
- Performance fix in Admin > Calendar Settings with over 2000+ active users
- Fix bug with convert to patient failing to create health fund
- Fix stripe issue with telehealth online bookings
- Fix bug with view of results
- Fix bug with medication management link on new patients

## Release Notes for CareRight 7.3.9

#### Defects & minor enhancements

- Security fix for <https://nvd.nist.gov/vuln/detail/CVE-2025-25291> and <https://nvd.nist.gov/vuln/detail/CVE-2025-25292>
- Document download > Handle the attachment name is nil when encoding
- Trigger wrappers > Appointments > Handle changing status to cancelled better
- Customer specific change to a billing wizard
- Add consent for Upload My Health Record to assessments (patient fields)
- Dashboard > Appointments > Optimize and skip security checking of previous/next appointments, as we are only looking for the date
- Fix escaping of database name in SQL Server specific database migration to set compatibility level

### Release Notes for CareRight 7.3.10

#### Defects & minor enhancements

- Fix class call issue

### Release Notes for CareRight 7.3.11

#### Defects & minor enhancements

- Allow retrospective close of cases
- Add waitlist at location level
- Restrict MHR to ECDHE-RSA-AES256-GCM-SHA384 ECDHE-RSA-AES128-GCM-SHA256
- Customer specific billing wizard changes

### Release Notes for CareRight 7.3.12

#### Defects & minor enhancements

- Backport Appointment Checklists

### Release Notes for CareRight 7.3.13

- Fix pagination for professional contacts
- Add CSV sanitisation library to CSV outputs
- Bulk Billing consent forms - adjust UI
- Trigger scripts - convert attachment to patient document
- Default student SAML authentications to be inactive professional contact

### Release Notes for CareRight 7.3.14

#### Defects & minor enhancements

- Change default settings to 'paranoid' mode for devise.

## Release Notes for CareRight 7.3.15 (Unreleased)

### Defects & minor enhancements

- Security > Fix inconsistency of location access checks at list view vs individual object view
-
