## Manually adding

To manually create a suggested assessment, visit **Patient > Assessments > Suggested Assessments > New**.

You can select the assessments that should likely be performed.

**Area under active development:** From CareRight 7.7.0 onwards, these are being increasingly linked with Care Plans and Charting. The documented options below are subject to change.

□

You can optionally set:

- A deadline - for when this suggested assessment should be carried out by
- An expiry date - for example, performing an assessment after someone's discharge is of little value
- A completion strategy - an indicator of when the assessment should be completed by.
  - Before/After next appointment
  - Before/After discharge
  - Before/After next program session
- Whether the suggested item is linked with an activity or not.

## From Care Plans

Main article: [Clinical \(Shift\) Handover Tools & Care Plans](#) .

Care Plans allow you to set a schedule of chart updates and assessments to conduct.
